# Campus Events Platform

Build a s

## 1. Overview

You will design and implement a Campus Events Platform for societies on campus. The brief is intentionally multi-feature: after shared setup, work should split into parallel feature tracks, then rejoin for integration testing and submission. Work starts next Monday (2026-10-19). A mid-project design review is due Thursday 29 October 2026. Final submission is due Friday 06 November 2026 at 16:00 UK time.

## 2. Learning outcomes

- Model a branched workflow with shared setup, parallel features, and a merge before release.
- Ship authenticated CRUD with clear ownership and validation.
- Demonstrate automated tests and a short written reflection.

## 3. Required features (implement each as its own track)

**A. Auth & societies**

Sign up / sign in with email + password. Users can create or join one society. Only society admins can publish events for that society.

**B. Event catalogue**

List upcoming events with title, date/time, location, capacity, and society name. Support search by title and filter by date range. Detail page shows description and RSVP count.

**C. RSVP & waitlist**

Authenticated users can RSVP. When capacity is full, add them to a waitlist and promote the next person automatically if someone cancels.

**D. Admin moderation**

Society admins can edit/cancel events, export an attendee CSV, and mark no-shows after the event.

**E. Notifications**

Send a confirmation email on RSVP and a reminder 24 hours before the event starts (console/log stub is acceptable if real email is not configured).

## 4. Engineering requirements

- Create a private Git repository and work on feature branches with pull requests into main.
- Provide a README with setup, env vars, and how to run tests.
- Include seed data for at least 3 societies and 8 events so markers can click through quickly.
- Write automated tests covering auth, RSVP capacity limits, and waitlist promotion.
- Accessibility: keyboard-reachable primary flows and visible focus states.

## 5. Milestones & deadlines

- Kickoff / repo + environment ready - starting next Monday (2026-10-19)
- Design review (IA + key screens) - due Thursday 29 October 2026
- Feature freeze - two working days before the final deadline
- Final submission (code + short report, max 4 pages) - due Friday 06 November 2026 at 16:00

## 6. What to submit

Upload a zip of the repository (or a Git URL with a tagged release), a 4-page PDF report covering architecture and trade-offs, and a short demo script (bullet list of clicks for markers). Late work loses 10% per calendar day. Extensions need prior approval.

## 7. Out of scope

Native mobile apps, payments, map integrations, and AI recommendations are not required. A responsive web UI is enough.

*Tip for planning tools: treat Auth, Catalogue, RSVP, Admin, and Notifications as parallel branches after shared setup; remarge before testing and submission.*
